

What is Identity Thief:

Satish Kumar
Università della Svizzera italiana

What is identity theft?

**Identity theft means that
Someone steals your personal
information and Uses it without
permission**

**Now Question is
How does identity
theft happen?**

19's and 20's Century

Thief use stealing

21's Century

Thief use Phising

How You Know Your Identity was Stolen Warning Signs

If something change in your
account like username
and that was not
done by you

Now Question Is How You Can Reduce Your Risk

You can reduce your risk with you do not share personal information with others and make your password strong and change it time by time and activate alert service on your email address if you do any changes in your account

Stakeholders

Thief

Police

Victim

Company

What the police do

- Police try to stop this type of frauds and people afraid to do like this things

What the company can do

- Users checks data by some schedule
- Use Customer care service which check your data and if anything wrong they inform you

Pragmatism

Knowledge about the past experience

Check if something happen strange like User changing their user name again and again

If user changing password than they should ask for the old password and send email to the linked email address for authorisation

My Solution !

Impractical

User and use automate checking
for secure the data

Secure

If user make change than they should ask
for the old password and send email to
the linked email address
for authorisation

Now Question Is If Personal Information Is Stolen ?

- 1.Call to customer care
- 2.Complain to your local Police station
- 3.Change the password

BE CAREFUL

**Watch
your step**
