WEB CRITIQUE(by Satish kumar)

What is "Big Picture" by website ?

It is not clearly tell what it is represent and what is offering because we do not know it represent for which time history of informatics and it heading is tell us the university name and than history of informatics. Its mean is like we are represent only history of informatics in university. Not about all the history of informatics.

Search

     In this website there are no searching option for example i want to search some topic in the website and i do not know the year and in which part it is like hardware, software etc than we have to look all the topics and it is too hard

Navigation :

In this website it is problem of navigation because if we will enter in any part and if we want to go to another topic of same part than we have to go back and than we can enter in the topic

According to my experience
1. firstly i entered into hardware part
2. than i was enter into Mouse
3. and now i want to enter into printer
4. now i have to go back to hardware
5. and than i go to printer part

 And if we will go inside of any topic we do not know in which year we are it is explaining only about the heading of the object

Picture position

     As we can see in website the some page picture in the right side and some pages picture in the left sides and some in the middle that creates bad effect and in hardware the topic apple II the video is on the image

Error

     In the hardware the Intel 8085 and Intel 8086 topic if we will see this page downside there is error picture is out from the table page and that changes the location of external links and it is very important

File not found

     In this website when we are click on topic than there is no page on that link and this is very important for example in hardware the topic Steve jobs

Which time ?

In this website it is not easy to understand that website are represent from when to when without read the text

Image quality
In some topics the quality of image is not good and some topics it is not showing the image it show nothing like in software part and the topic is impact on hardware The image is not appear in the home page

Textual
In some pages text is not on the position they use the space before for example in hardware the topic Sophie Wilson there timeline first problem use tab before starting and another is write the year and down from word write local alphabets also

Whats next
When we enter in topic than like software than we can see the arrow represent both sides and you can go previous topic or next topic with click on arrow and downside the arrow it represent the next or previous topic name and also see in year table what is next and previous click on year template and go to that topic

Information about main topics
For example i go to internet part and on the main page i see topic man-computer symbiosis and than i do not understand i click on internet but what is internet representing. For knowing that thing i have to scroll down and than i will know what internet represent

Short information about topic
In all the part for example hardware, software etc and enter in part we saw topic like in hardware part we saw the history of keyboard and in small text that cover only first some line it is not represent the main lines than somebody will be interested to read

Links
It is good thing that it is linked the page with the whole website i mean that if i will go in hardware part and than keyboard hardware timeline and i found the name Apple in this topic and i will click on apple than it represent me the Apple topic in the website and than i can read about Apple

Important information
It is not represent any thing for the important information about the topic but it is highlight the important names and some time years and some important name it represent in Italian font

Representing

In my point of view in hardware, software,internet homepage we can read only basic summary what it is represent but in game part it represent summary also represent another thing that make it different from another

Navigation

Yes user should know where they are but in this website they know only the main topic for example hardware, software,internet,games or home but without reading text they do not know in which year they are.

where they can go it is very important according to this website if user enter into one topic and then there are no forward or backward way then the user have to go back to main topics.

It is not easy to understand because firstly in main page we click on picture on topic and than then we go inside but after enter into main topic we see the topic name with picture and then we click on picture than nothing will happen and we have to click on name for read the topic

Visibility

Yes the same menu located in the same place on each pages

Yes we have to scroll down to see on the page and also the game page we have to scroll more than other pages thats make some different from other pages

No we do not know the section heading without having scroll down the page for example in software part we go to topic multitasking there are to many heading we can read only 3 or 4 headings without scroll down.

No as i talk before 'short information about topic' it show the name and the first some lines in representation for the topic.

Text

According to my task i enter into internet and enter into Man computer symbiosis here i see that here they are highlight only one line and this is free from spelling mistakes and grammar.

Appearance

Yes graphic design represent to the purpose of website like in home page we divide it into four parts and there we can see there are four picture represent four topics

As i talk before there are some page which is showing error and when try to open there are show error file not found that is big problem

Yes the design of the home page direct your eyes to graphics and other page elements according to the images we can understand inside this topic what will be?

No some contents name are repeated in this website like Apple Lisa firstly it was in hardware and it also in multitasking.

Summary Table

Rank	problem	description
1	Search	That is very important to use search tab than user can easily find their topics
2	Navigation	There is no navigation than we can go one to another topic we have to go back
3	Menu	It should be another menu bar that represent all the topic name with year
4	Homepage	Homepage of this website and the heading is "Università della Svizzera Italiana's History of Informatics" that mean it represent the history of informatics of the university not for the world
5	Summary	when we homepage of any topic like game and than we see Konami and in small font write first some lines of paragraph. My point of view it should be some important lines
6	Entry page	The entry page of game that make different from another because in another pages it is short summary but in game it is long
